

Portfolio Website - Interview Notes

Data Analytics Portfolio Website - Interview Notes

Project: Data Analytics Portfolio Website

Purpose: To present my analytics background in a professional format accessible by recruiters and clients.

What I Learned:

- Django structure: urls.py, views.py, models.py, templates/
- Creating a dynamic database-driven project page
- Working with static files, linking CSS
- Using Django admin to add and manage projects
- Deploying on Render and solving deployment bugs

Challenges Faced:

- Static file path issues during deployment
- Flexbox layout and responsiveness tweaking
- Debugging database updates via admin panel

Interview Talking Points:

- Why Django over website builders?
- How dynamic project rendering works with models
- Handling deployment and testing
- Future improvements (contact form, blog, animations)
